Clinical Variants Download Help

This file contains a list of variant-drug pairs and the level of evidence for each association. Please read the strength of evidence documentation for a complete description of the different levels of criteria. Detailed descriptions of the associations, including supporting PMIDs, are not available for automatic download. More information can be found on the ClinPGx licensing page.

1. variant = name or symbol of the variant
2. gene = HGNC ID of the gene
3. type = category or categories that the annotation falls in
4. level of evidence = strength of evidence for the annotation
5. chemicals = drug(s) associated with the variant in the annotation; from the ClinPGx drug vocabulary
6. phenotypes = associated disease phenotype(s), where applicable
